

PRODUCT SHEET · ANDROID COMPANION · 4 PAGES

Your charging companion for Kenya.

Find a live hub, size Pulse charger or Pod energy storage, and pay with M-Pesa — built around how you drive and park. Android only. Not a live chatbot.

FIND A HUB

SIZE HOME ENERGY

PAY WITH M-PESA

ANDROID 8.0+

Same products we install. Same M-Pesa flows. The companion is the phone layer on top of Precifarm charging in Kenya.

01

Find a hub

Open Charging Hub. Filter Corridor DC, Boda Hub swap or partner sites. Live and planned labels stay honest. Get directions before you leave.

02

Size home energy

See whether Pulse charger or Pod energy storage fits your wall, feeder and parking. Request a survey — we confirm the site before we quote.

03

Pay with M-Pesa

Pay a session or Lipa Pole Pole instalments on any phone. Deposit, monthly and total are shown before you confirm — no bank account required.

Built for how Kenya actually charges.

Public EV charging in Kenya is a mix of mall plugs, fuel-retailer partners, operator apps and Kenya Power sites — not one national network. Apps that work here find a station, start a session and take M-Pesa, because most drivers do not pay a charger with a bank card.

What Kenya charging apps already do

Operator apps such as EVChaja, Kencharge and Kabisa-style networks typically let a driver locate stations, filter by connector or power, start or monitor a session, and pay with mobile money.

The Open Charge Alliance (2025) treats M-Pesa as the mobile-first payment for Kenyan EV charging — send and receive money on the phone, no bank account required. USSD still matters on feature phones.

What Precifarm adds

Most kilometres in Kenya still start at home. A map-only app leaves the driveway, the wallbox and Lipa Pole Pole to a separate sales call.

The Precifarm AI companion puts public Charging Hub, Pulse / Pod home surveys and M-Pesa pay on one Android account — the same products we install, with live and planned sites labelled honestly.

WHAT KENYAN EV DRIVERS NEED — TYPICAL OPERATOR APP VS PRECIFARM COMPANION

JOB	TYPICAL KENYA CHARGING APP	PRECIFARM AI COMPANION
Find a public charger	Operator map	Charging Hub: Precifarm + EVChaja + ChargeNet + partners
Pay without a bank card	M-Pesa / mobile money	M-Pesa, USSD and SMS — price shown first
Size a home wallbox	Usually a separate sales form	Pulse charger and Pod energy storage survey in-app
Spread the hardware cost	Rarely in the same app	Lipa Pole Pole from KES 3,300/month on M-Pesa
E-boda battery swap	Some operator apps	Boda Hub listed on the same map
Honest live vs planned	Mixed	Live sites labelled live; planned stay planned

Charging Hub

Precifarm, EVChaja, ChargeNet and partner sites — filter by fast DC or Boda swap, then navigate in maps.

Home + storage

Request a Pulse charger or Pod energy storage survey. Certified installation and three-year aftersale care on M-Pesa.

Vehicle-aware

Select your car or e-boda so recommendations follow battery size, connector and how far you actually drive.

Lipa Pole Pole

Pay deposit and monthly instalments via M-Pesa, USSD or SMS. Totals shown before you confirm.

120 kW+

Corridor DC

T-canopy highway DC with overhead cables — about 60 kWh in 30 minutes. Dual CCS2 where listed. From KES 39/kWh on M-Pesa.

<5 min

Boda Hub swap

Fresh battery for Roam Air and compatible e-bodas in Nairobi, Kisumu and Nakuru — swap or kerbside charge.

Retail & malls

Partner chargers

Shell, Total, Naivas, malls and campuses — DC stops along the routes you already drive.

The same products we install.

Spark through Corridor — specs, fit and M-Pesa in the companion and on the website. A typical Nairobi day is about 60 km / 10 kWh.

					
Spark charger 3.3 kW · Type 2	Pulse charger 7 kW · Type 2	Pod energy storage 7 kW + 5 / 10 kWh	Boda Hub Pack swap	Depot station 22 kW AC	Corridor charging 120 kW+ DC · CCS2

PRODUCT	POWER / ENERGY	ROLE	TYPICAL SESSION
Spark charger	3.3 kW · Type 2	Portable lead in the boot	~180 min for a typical day
Pulse charger	7 kW · Type 2	Home wallbox	~90 min for a typical day
Pod energy storage	7 kW + 5 / 10 kWh	Home charger + backup	Charge when Kenya Power dips
Boda Hub	Pack swap	E-motorcycle	Back on the road in <5 min
Depot station	22 kW AC	Fleet yard	40+ kWh in ~120 min
Corridor charging	120 kW+ DC · CCS2	Highway T-canopy	~60 kWh in 30 min

Before you install.

What is the Precifarm AI companion?

It is Precifarm's Android companion for charging in Kenya. Use it to find a hub, size Pulse charger or Pod energy storage, and pay with M-Pesa. It is not a live chatbot.

Is it on the Google Play Store?

Not yet. Install the APK from precifarm.com/download. Allow installs from your browser if Android asks. iOS is not available yet.

How do I pay in the companion?

Charging sessions and Lipa Pole Pole instalments use M-Pesa. Session price, deposit, monthly and total are shown before you confirm. USSD and SMS work on phones without a bank account.

Can I use Charging Hub without installing?

Yes. Open Charging Hub on precifarm.com/network in your browser for the site list. Filters, directions and session pay live in the companion.

Get the AI companion.

Need charging without the install? Charging Hub and home surveys work in the browser. The companion adds filters, directions and M-Pesa on your phone.
